

Weekly Economic Recap –

Inflation Expectations Surge as Consumers Grow Pessimistic on Outlook

In March, consumers increased credit by the smallest amount this year (\$6.3 billion) as consumers' spending on credit cards increased at the slowest pace since falling three years ago. The increase in total credit was driven by non-revolving credit, such as loans for vehicles and school tuition.

Initial claims for unemployment benefits increased last week to the highest level since August 2023 (231K) and by more than consensus estimates (212K). More than half of the increase was attributed to increases in New York as public school workers are allowed to apply for benefits during spring break, which boosted the numbers.

The Bank of England (BOE) held interest rates steady at their May meeting (5.25%) and signaled restrictive monetary policy was taming inflation in the region. BOE Governor Andrew Bailey stated, “the latest [inflation] figures were encouraging, but [the bank] is not at a point where we can cut rates.”

The University of Michigan Consumer Sentiment Index plummeted to its lowest level in six months (67.4). Consumers across all age and income levels grew increasingly worried about inflation, employment, and interest rates. Year-ahead inflation expectations increased to 3.5% (from 3.2%).

Key Takeaways:

- Consumers slowing pace of credit card usage.
- Unemployment claims climb to highest level since August.
- Consumer sentiment plummets as inflation expectations climb.
- Value sectors lead U.S. equities higher.
- Municipal bonds lead performance.
- Commodities higher for first time in three weeks.

Weekly Market Recap –

Global Equities Rise on Rate Cut Optimism

Equities: The MSCI AC World Index was higher for the third straight week as investors assess the Fed’s likelihood of rate cuts later this year. European and United Kingdom equities led the gains in the developed world on softer than expected central bank rhetoric. Within the U.S., value stocks outperformed growth stocks on gains in financials and utilities.

Fixed Income: The Bloomberg Barclays Aggregate Index was marginally higher for the second consecutive week as softer data kept yields lower. The 10YR yield held steady at the 4.50% level. Municipal bonds led the gains in fixed income while short term Treasuries and high yield lagged.

Commodities/FX: The Bloomberg Commodity Index was higher for the first time in three weeks led by agriculture products. World wheat stockpiles for the 2024-2025 season are expected to be below average and the lowest in eight years, according to the U.S. Department of Agricultural’s initial forecast. Gold prices were higher for the first time in three weeks after weaker-than-expected jobs data caused investors to anticipate Fed rate cuts later this year.

Consumers Expect Higher Inflation; Sentiment Falls

Data is as of April 2024.

Source: FactSet Research Systems, Verdence Capital Advisors

Key Takeaways:

- Is Sell in May and go away still a thing?
- The age-old adage has lost its validity.
- Summer is still weakest period of performance.
- Inflation cannot be ignored.
- Deficit and debt issuance is a risk to stocks and bonds.

Sell in May and go Away?

Most investors are familiar with the age old adage, “sell in May and go away.” It has been a historical investment phrase that suggests traders go away for the summer months and markets tend to be volatile and weak. However, with the advancements of technology, business can be performed nearly anywhere so this theory has lost some of its validity. What we can confirm is that since 1945, the S&P 500 has posted its weakest performance in the months of May to August compared to the months of January to April and September to December. The Index has been up 68% of the time since 1945 during the summer months and the average return has been 2.1%. This compares to 4.0% in January to April and 3.9% in September to December, on average. Instead of using historical theories as a precedent when making investment decisions, we will look at fundamentals and valuations to decipher if risks (both upside and downside) are priced into assets. Unfortunately, we see many risks this summer which could lead to volatility and potential market pullbacks. Some of the factors we are monitoring that could disrupt this momentum driven rally include:

- **Inflation proving problematic:** This week we will receive data on inflation at the consumer and producer level for April. Inflation has been trending higher and that is a problem. This is not only seen in headline inflation data (e.g., CPI, PPI) but also in reports on manufacturing prices, service prices and most recently consumer inflation expectations. This is a challenge for the Fed and if it continues, rate cut hopes for 2024 may be completely crushed.
- **Budget deficit alarming:** According to Strategas Research Partners, April tax collections were weaker than anticipated but government spending jumped 23% in the month. As a result, the budget deficit is hovering near \$2 trillion and is at risk of worsening further, especially if the labor market weakens and tax revenues fall short of expectations. This means more Treasury debt issuance. The next quarterly refunding announcement (when the Treasury announces the size of issuance for the upcoming quarter) occurs on July 31, 2024. Last year a surprise increase in issuance created volatility in both stock and bond markets.
- **Valuation correction:** The forward PE multiple of the S&P 500 has increased ~5% over the past month making the multiple over 20% above its historical average since 1990. This is occurring while Fed rate cuts are being pushed out, the economy is weakening, and inflation is proving difficult to control. If this persists, we see a valuation led correction likely.
- **Politics/Geopolitics:** In July and August we will see the Republican and Democratic conventions. The race to the White House will be in its final innings. Candidates will set more defined goals that could impact market sentiment. In addition, geopolitical tensions around the world are more profound.

The Bottom Line:

The coming months will bring many economic, political and valuation risks to the markets. We find a 10% pullback likely as investors accept that interest rates will remain higher for longer, we may not see the rate cuts that are priced in at current levels and there is even a slight risk we may see an increase in rates before year end.

Weekly Insights/Quarterly & Annual Outlook The indexes presented are unmanaged portfolios of specified securities and do not reflect any initial or ongoing expenses nor can it be invested in directly. An investment's portfolio may differ significantly from the securities in the index. Semi-Annual Chart Pack Where shown, performance information presented is that which has been calculated and presented by an unaffiliated third-party manager. We have no insight into the performance of the advisor/product/account or fund shown and do not attempt to determine whether the performance presented is accurate. Therefore, the performance could be incorrect, overstated or not reflective of actual trading of client funds. There is the potential that the performance shown is a back test and not the result of real investment advice and trading. As such, it could not be relied upon as indicative of future returns of a particular strategy. Where performance shown is that of a pooled account, limited partnership, or private equity fund, you should be aware that there is a significant lack of transparency into the operations and investment process and investment vehicles invested in. As a result, pricing and valuation of the underlying holdings which produced the stated performance could be incorrect, stale, or overstated and therefore the performance figures presented cannot be relied upon. Before investing, we encourage you to request additional information, particularly performance information, of any product that you are considering for your client. You should read, as applicable, the Prospectus, SAI, Composite Disclosure and/or performance disclosure associated with any product that you are considering for investment for your or your client's. Products shown may have minimum account sizes or minimum investments which may preclude retail and non-high net worth investors from being able to invest in these products. You should be aware that certain LPs may be closed to new investors and therefore your clients may be prevented from investing in these products. Portfolio Implementation and Rationales The SMA Asset Allocation Models do not represent a personalized recommendation of a particular investment strategy to you or your clients. You should not buy or sell an investment without first considering whether it is appropriate for your client's portfolio. Additionally, you should review and consider any recent market news. All expressions of opinion are subject to change without notice in reaction to shifting market conditions. Data contained herein from third-party providers is obtained from what are considered reliable sources. However, its accuracy, completeness or reliability cannot be guaranteed. Supporting documentation for any claims or statistical information is available upon request. Examples provided are for illustrative purposes only and not intended to be reflective of results you can expect to achieve. Diversification and asset allocation do not ensure a profit and do not protect against losses in declining markets. Any forecasts contained herein are for illustrative purposes only, may be based upon proprietary research and are developed through analysis of historical public data. Investments in growth stocks may experience price volatility due to their sensitivity to market fluctuations and dependence on future earnings expectations. Sector allocation references to market capitalization ("smid cap" or "micro caps" etc.) may be subject to special risks given their characteristic narrow markets, limited financial resources, and less liquid stocks, all of which may cause price volatility. International/global investing can involve special risks, such as political changes and currency fluctuations. These risks are heightened in emerging markets. A significant percentage of the underlying investments in aggressive asset allocation portfolio investments have a higher-than-average risk exposure. You should consider your risk tolerance of each of your clients carefully before choosing such a strategy. An investment with multiple underlying investments (which may include asset-allocation or custom blended investments) may be subject to the expenses of those underlying investments in addition to those of the investment itself. Investments may reside in the specialty category due to 1) allowable investment flexibility that precludes classification in standard asset categories and/or 2) investment concentration in a limited group of securities or industry sectors. Investments in this category may be more volatile than less flexible and/or less concentrated investments and may be appropriate as only a minor component in an investor's overall portfolio. Investment Managers You and your clients should carefully consider investment objectives, risks, charges, and expenses of Funds discussed. This and other important information are contained in the respective Fund prospectuses and summary prospectuses, which should be read carefully before investing. Investment portfolio statistics change over time. Current performance may be lower or higher than return data quoted herein. The investment return and the principal value of an investment will fluctuate; so, an investor's shares/units, when redeemed, may be worth more or less than their original cost.
