

Weekly Economic Recap –

GDP Slows, Fed’s Inflation Gauge Cools

Home prices accelerated in March at the fastest annualized pace since October 2022 according to the S&P CoreLogic Index (+7.4%). The increase for March was led by New York, Cleveland and Chicago.

Consumer confidence unexpectedly rose in May for the first time in four months according to the Conference Board. The expectations index increased by the most since July 2023 driven by expectations for better labor market conditions in the year-ahead. Consumers remain concerned about inflation as the year-ahead inflation expectations increased to the highest level since December (5.4%).

The U.S. economy grew at a slower pace in the first quarter than initially reported (1.3% QoQ vs. 1.6% QoQ) as consumer spending was revised lower (2.0% QoQ vs. 2.5% est.). Net exports detracted from headline economic growth for the first time in two years.

Pending home sales fell 7.7% in April, the biggest drop since April 2020. Buyers were squeezed by higher mortgage rates during the period. Sales were lower in all regions but fell the most in the Midwest and West. The share of sellers cutting prices hit the highest level since 2002 (6.4%).

The Fed’s preferred inflation gauge, PCE Core, increased in-line with consensus estimates (0.2% MoM), which was the smallest advance of the year. Inflation-adjusted consumer spending unexpectedly fell 0.1% as consumers decreased consumption for services and durable goods.

Key Takeaways:

- Consumer confidence higher, but concerns over inflation remain.
- Economic growth increases slower than expected on spending.
- Fed’s preferred inflation gauge posts smallest advance of year.
- Value sectors outperform, but global equities lower.
- Fixed income relatively flat for the week.
- Commodities post worst performance since December.

Weekly Market Recap –

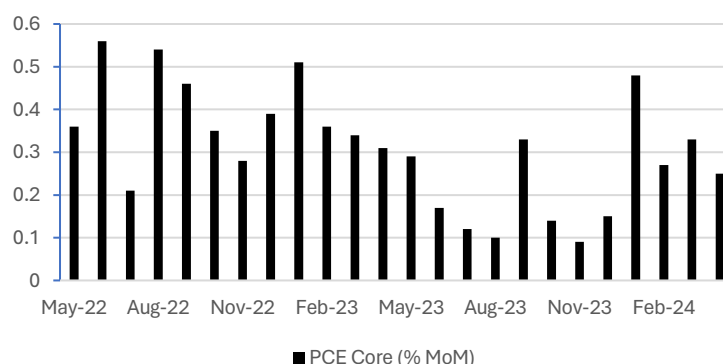

Value Sectors Outperform

Equities: The MSCI AC World Index was lower for the second straight week as consumers remain concerned about the economy. Major U.S. averages were lower for the week with the S&P 500 and Nasdaq each snapping five-week winning streaks, while the Dow Jones Industrial Average was lower for the second straight week. The small-cap Russell 2000 Index was the only average marginally higher. Value sectors outperformed growth sectors as investors shifted away from technology.

Fixed Income: The Bloomberg Barclays Aggregate Index was flat for the week as the rise in yields stalled on inflation data that came in as expected. Municipal bond prices fell the most of all fixed income sectors as Treasury yields were whipsawed during the week. U.S. TIPS were the best performing area of fixed income.

Commodities/FX: The Bloomberg Commodity Index fell for the second straight week and posted its worst return since December. Crude oil prices were lower on weak U.S. demand despite the kick-off to summer driving season. Agriculture products, including wheat, were lower as weather concerns remain.

PCE Core Increases at Slowest Pace This Year

Footnotes: Data is as of May 2024.
Source: FactSet Research Systems, Verdence Capital Advisors.

Key Takeaways:

- Inflation improving modestly, but signs still point to sticky pressures.
- Fed reaffirms stance of not having enough confidence to cut rates yet.
- U.S. tech trade remains red hot as Nasdaq posts best return since November.
- Investors favor quality fixed income.
- Commodity performance driven by wheat and gold prices climbing higher.

April Showers Brought May Flowers

Equity and bond markets staged an impressive turnaround in May after a dismal April performance despite mixed economic and inflation data which further pushed out expectations for Federal Reserve rate cuts this year. Fed officials remained committed to their efforts to combat inflation, indicating they need more confidence that inflation is heading to their target rate before cutting rates. This week, we review May from an economic data and asset class perspective.

- **Inflation is easing but still sticky:**

The Fed's preferred inflation gauge, PCE Core, increased at the slowest monthly pace of the year. However, on an annualized basis, inflation at nearly every metric is growing well above the Fed's 2% target.

- **The Fed needs more confidence before cutting rates:**

The Minutes from the April 30/May 1 FOMC meeting reaffirmed their stance that there is a lack of confidence to cut interest rates imminently.

- **Manufacturing activity weak:**

The ISM Manufacturing Index has been in contraction territory for 18 out of the past 19 months while prices paid remain elevated.

- **Consumer spending slows:** Retail sales excluding gas, auto, building materials and food dropped at the fastest pace in four months as inflation is impacting spending.

- **Housing struggles:** As the mortgage rate moved higher, housing data struggled during the month. Existing, new and pending home sales all dropped during the month.

Global Equities – U.S. leads: The MSCI AC World Index posted its best month in three months on a robust earnings season out of the U.S.

- **U.S. growth trade remains red hot:** The Russell 3000 Growth Index outperformed its value counterpart by the most in three months. The tech-heavy Nasdaq Index recorded its best return since November on strong earnings results.

- **Developed markets lead international performance:** Developed markets (MSCI EAFE) outperformed emerging markets (MSCI EM) in May as investors continued to digest global inflation data and its implications for central bank monetary policy moving forward.

Fixed Income – Quality leads rally:

The Bloomberg Aggregate Index posted its best monthly return of the year as Treasury yields retreated to end the month. A cool PCE inflation reading at month end led yields to drop.

- **Safer areas of fixed income rally:** Investment grade corporate bonds, and mortgage-backed securities led the gains in fixed income as yields dropped.

- **Municipals underperform the market:** Municipal bonds were lower for the third straight month as Treasuries were volatile for the month and supply was an issue surrounding unwinding of Silicon Valley Bank's portfolio.

Commodities – Supply remains a concern. The Bloomberg Commodity Index was higher for the third straight month on supply concerns.

- **Grains led the gains:** Wheat posted its best performance since October, due to global weather concerns.

- **Precious metals remain strong:** Gold prices were higher for the fourth straight month as investors continued to pile into the safe haven amid rate path uncertainty.

Global Equities Fall on Weak GDP in the U.S.

Weekly Insights/Quarterly & Annual Outlook The indexes presented are unmanaged portfolios of specified securities and do not reflect any initial or ongoing expenses nor can it be invested in directly. An investment's portfolio may differ significantly from the securities in the index. Semi-Annual Chart Pack Where shown, performance information presented is that which has been calculated and presented by an unaffiliated third-party manager. We have no insight into the performance of the advisor/product/account or fund shown and do not attempt to determine whether the performance presented is accurate. Therefore, the performance could be incorrect, overstated or not reflective of actual trading of client funds. There is the potential that the performance shown is a back test and not the result of real investment advice and trading. As such, it could not be relied upon as indicative of future returns of a particular strategy. Where performance shown is that of a pooled account, limited partnership, or private equity fund, you should be aware that there is a significant lack of transparency into the operations and investment process and investment vehicles invested in. As a result, pricing and valuation of the underlying holdings which produced the stated performance could be incorrect, stale, or overstated and therefore the performance figures presented cannot be relied upon. Before investing, we encourage you to request additional information, particularly performance information, of any product that you are considering for your client. You should read, as applicable, the Prospectus, SAI, Composite Disclosure and/or performance disclosure associated with any product that you are considering for investment for your or your client's. Products shown may have minimum account sizes or minimum investments which may preclude retail and non-high net worth investors from being able to invest in these products. You should be aware that certain LPs may be closed to new investors and therefore your clients may be prevented from investing in these products. Portfolio Implementation and Rationales The SMA Asset Allocation Models do not represent a personalized recommendation of a particular investment strategy to you or your clients. You should not buy or sell an investment without first considering whether it is appropriate for your client's portfolio. Additionally, you should review and consider any recent market news. All expressions of opinion are subject to change without notice in reaction to shifting market conditions. Data contained herein from third-party providers is obtained from what are considered reliable sources. However, its accuracy, completeness or reliability cannot be guaranteed. Supporting documentation for any claims or statistical information is available upon request. Examples provided are for illustrative purposes only and not intended to be reflective of results you can expect to achieve. Diversification and asset allocation do not ensure a profit and do not protect against losses in declining markets. Any forecasts contained herein are for illustrative purposes only, may be based upon proprietary research and are developed through analysis of historical public data. Investments in growth stocks may experience price volatility due to their sensitivity to market fluctuations and dependence on future earnings expectations. Sector allocation references to market capitalization ("smid cap" or "micro caps" etc.) may be subject to special risks given their characteristic narrow markets, limited financial resources, and less liquid stocks, all of which may cause price volatility. International/global investing can involve special risks, such as political changes and currency fluctuations. These risks are heightened in emerging markets. A significant percentage of the underlying investments in aggressive asset allocation portfolio investments have a higher-than-average risk exposure. You should consider your risk tolerance of each of your clients carefully before choosing such a strategy. An investment with multiple underlying investments (which may include asset-allocation or custom blended investments) may be subject to the expenses of those underlying investments in addition to those of the investment itself. Investments may reside in the specialty category due to 1) allowable investment flexibility that precludes classification in standard asset categories and/or 2) investment concentration in a limited group of securities or industry sectors. Investments in this category may be more volatile than less flexible and/or less concentrated investments and may be appropriate as only a minor component in an investor's overall portfolio. Investment Managers You and your clients should carefully consider investment objectives, risks, charges, and expenses of Funds discussed. This and other important information are contained in the respective Fund prospectuses and summary prospectuses, which should be read carefully before investing. Investment portfolio statistics change over time. Current performance may be lower or higher than return data quoted herein. The investment return and the principal value of an investment will fluctuate; so, an investor's shares/units, when redeemed, may be worth more or less than their original cost.
